The logistics challenge of global business

Цель – формирование способности к коммуникации в устной и письменной формах на русском и иностранном языках для решения задач межличностного и межкультурного взаимодействия (ОК-5)

- A In little more than a generation, US-based sports company Nike Inc. reinvented the concept of the sports shoe. It transformed the cheapest of mass-market footwear into high-tech, high-performance products, with all the cachet of haute couture and carrying price tags to match.
- B Technologically, Nike's products are leading edge, as is its brand-led marketing, which successfully used sporting-superstar endorsement to establish the brand as an icon of youth subculture. However, as in any global organisation, logistics and the management of the supply chain is a crucial strategic issue at Nike.
- C From its headquarters in Beaverton, Oregon, Nike operates a globe-spanning virtual enterprise. At its core are a set of business processes, designed to combine its state-of-the-art R&D capabilities with a ruthlessly low-cost manufacturing strategy. The company outsources virtually 100 per cent of its shoe production, for example, retaining in-house manufacturing of a few key components of its patented Nike Air System.
- D Nike's basketball shoe, for example, is designed in Oregon and Tennessee and developed jointly by Asian and US technicians in Oregon, Taiwan and South Korea. The shoes themselves are manufactured in South Korea (men's sizes) and in Indonesia (boy's sizes), from 72 components supplied by companies in Japan, South Korea, Taiwan, Indonesia and the United States. Moreover, the complexity of the product means that it passes through more than 120 pairs of hands during the production process. It also means that there is a danger of extended lead times.
- E Tying the whole Nike enterprise together are information systems that co-ordinate each step of these far-flung activities, and a logistics infrastructure capable of bringing the components together at precisely the right time, as well as managing the supply of finished goods into the global marketplace.
- F Significantly, both are flexible enough to cope with the constant product, materials and process innovation, allowing the company to bring more than 300 new shoe designs to market each year. However, this punishing rate of innovation brings with it high levels of finished inventory if sales forecasts are not achieved.
- G In the United States and Europe, primary distribution of Nike products is increasingly outsourced to specialist third parties, who are linked into the company's global-sales and customer-service support systems. These links allow the contractors to prioritise shipments and manage order fulfilment as cost effectively as possible, while ensuring that product-availability information is readily accessible to all decision-makers throughout Nike's virtual enterprise.
- H Importantly, too, these organisational capabilities will be extremely useful for Nike if fashion-conscious young consumers turn away from designer sports shoes, forcing the company to rely more heavily on sales of its widening portfolio of sports equipment, clothing, watches and eyewear.
- I When the supply chains are global and the products are fashion oriented, the management of logistics becomes a key factor in business success or failure.

3

from *Logistics and Supply Chain Management – Creating Value-Adding Networks* by Martin Christopher

- 1 Nike outsources almost all of its shoe production, as well as its distribution in Europe and the US. In fact, it is called a *globe-spanning virtual enterprise*. What are the pros and cons of Nike's business strategy?
- 2 Nike has had some bad publicity in recent years about the working conditions in some of the factories in developing countries where its shoes are manufactured. Given the outsourcing business model Nike uses, how can the company ensure that its suppliers comply with good employment practice?

Speak about the role of a supply chain for an international company.
